

## » DY Portable belt conveyor

### Description

DY portable belt conveyor is a kind of equipment used in project, which is convenient to move. Mainly used in loading and unloading locations often change places, such as ports, docks, stations, yard, warehouse, construction sites, sand quarry, farms, and other for short distance transport and loading and unloading of bulk materials or single piece under the weight of 100 kg .

The conveyor can be divided into two types: the lifting type and the non lifting type, the conveyor belt is driven by the electric roller, the lifting and running of the whole machine is non motorized, if need, can be designed as motorized or electric.

## Technical Parameter

Model	Tape width mm	Conveyor belt mm	Speed m/s	Capacity			Lifting height	Dimension		
				Parallel roller		Grooved roller		A	B	H
				Piece/h	t/h	t/h				
DY4031	400	3	Parallel roller 0.8	800	40	80	1.2	3342	880	1255
DY4051		5						5392	880	1227
DY4071		7					7403	880	1329	
DY40101		10					10420	880	1323	
DY5051	500	5	Grooved roller 1.6	1400	70	145	1.6	5465	980	1669
DY5071		7						7513	980	1620
DY50101		10					11308	1290	1802	
DY50151		15					16350	1290	1646	
DY6551	600	5		2600	130	265	1.5	5494	1150	1590
DY6571		7						7523	1150	1554
DY65101		10					11308	1460	1852	
DY65151		15					16340	1460	1884	

Note: Items in throughput calculated by 50kg/piece.
